RANI KUMARI

ANGULAR & .NET DEVELOPER | FULL-STACK

Soest, Netherlands | +31 6 5181 4636 | ranik71091@gmail.com

github.com/ranisingh | linkedin.com/in/rani-kumari-8ab59576

Authorized to work in the Netherlands without sponsorship | Available immediately | Hybrid or on-site

PROFESSIONAL SUMMARY

Angular & .NET Developer with 4+ years of professional experience building, maintaining and improving enterprise web applications with Angular, TypeScript and RxJS, and hands-on project experience with C#, ASP.NET Core Web API, Entity Framework Core and SQL Server. Experienced in translating business requirements into reusable components, integrating Angular frontends with REST APIs, securing applications with JWT and role-based authorization, and improving performance and maintainability. After a planned career break following my relocation to the Netherlands, I have kept my Angular skills current with Angular 18 (standalone components, Signals, new control flow) and built my own full-stack projects with an ASP.NET Core Web API and SQL Server backend. I am looking for a Medior full-stack role in an Angular + .NET team.

KEY STRENGTHS

- **Professional Angular experience:** 8 enterprise applications serving 2,500+ users, built and maintained over 4 years.
- **Quality and performance:** ~35% faster page loads and ~40% fewer recurring production issues through optimisation and refactoring.
- **Modern Angular:** standalone architecture, Signals and computed() state, new control flow, inject(), lazy-loaded routes (Angular 18).
- **Full-stack Angular + .NET:** built ASP.NET Core Web APIs with C#, EF Core, LINQ and SQL Server, secured with JWT and role-based authorization, designed to connect end-to-end with Angular frontends.

CORE SKILLS

Angular: Angular (v5–v18), Angular CLI, Standalone Components, Signals, Components, Services, Directives, Pipes, Dependency Injection, Routing, Lazy Loading, Reactive Forms, Route Guards, HTTP Interceptors

Frontend: TypeScript, JavaScript ES6+, RxJS, Observables, HTML5, CSS3, SCSS, Angular Material, Tailwind CSS, Bootstrap, responsive design, WCAG 2.1 AA

Backend (.NET): C#, ASP.NET Core Web API, Entity Framework Core, LINQ, SQL Server, REST API design, Swagger / OpenAPI

Security: JWT authentication, Role-Based Access Control (RBAC), route guards, HTTP interceptors, session-timeout handling, validation

Quality & Delivery: Refactoring, technical-debt reduction, performance optimisation, code reviews, Git, GitHub, Azure DevOps CI/CD, Pull Requests, Agile/Scrum, Postman, VS Code

AI Developer Tools: Claude, ChatGPT, GitHub Copilot: AI-assisted coding, code review, debugging and refactoring; building AI apps in .NET (Microsoft.Extensions.AI, RAG, tool calling, MCP)

PROFESSIONAL EXPERIENCE

Frontend Developer (Angular) | MAD-learn, Noida, India **Jun 2018 – Jul 2022**

- Developed and maintained 8 enterprise Angular applications serving 2,500+ active users, using a modular, reusable component-based architecture.
- Translated functional and business requirements into reusable components, services, Reactive Forms and custom directives with Angular, TypeScript and RxJS.
- Integrated applications with REST APIs and backend services, handling asynchronous flows and errors with RxJS and Observables.
- Implemented secure access for different user roles with JWT authentication, role-based authorization, route guards and HTTP interceptors.
- Optimised frontend performance and user journeys, contributing to approximately 35% faster page-load times.
- Resolved production defects and refactored code for maintainability, contributing to approximately 40% fewer recurring production issues.
- Built responsive, accessible interfaces with HTML5, SCSS, Angular Material and Bootstrap (WCAG 2.1 AA, cross-browser).
- Worked in a 10-person Agile/Scrum team: code reviews, pull requests, sprint ceremonies, Azure DevOps CI/CD releases and production support.

Angular Developer (Freelance) | Viomatech, Netherlands (Remote) **Aug 2025 – Present**

Project-based freelance Angular development for short-term clients.

- Built and maintained Angular web application features with TypeScript, RxJS and Angular Material.
- Integrated frontends with REST APIs, including authentication and form validation.
- Delivered work independently, from requirements to release.

Career Break, Upskilling in Angular & .NET | Netherlands **Aug 2022 – Jul 2025**

Planned career break after relocating to the Netherlands, used to keep my Angular skills current and learn .NET backend development.

- Kept building with modern Angular (v18): standalone architecture, Signals-based state, new control flow, RxJS, route guards and HTTP interceptors.
- Learned C#, ASP.NET Core Web API, Entity Framework Core and SQL Server through structured .NET full-stack training and hands-on projects.
- Built three applications independently (below), owning architecture, frontend, backend and refactoring decisions.
- Used AI tools (Claude, ChatGPT, GitHub Copilot) in daily development for code review, debugging and refactoring, while learning Dutch (A1).

PROJECTS (ANGULAR + .NET)

DevOps AI Assistant | C#, ASP.NET Core, Microsoft.Extensions.AI, Azure AI Search, MCP **2026 – Present (in progress)**

Learning project, built step by step: LLM, then RAG, then tool calling, then MCP

- Incident Update Polisher: ASP.NET Core Minimal API that turns rough incident notes into clear status updates for leadership or customers using an LLM.
- Runbook Chatbot (RAG): answers questions from runbook PDFs with Azure AI Search vector search and embeddings, and shows the source document and page.
- Deployment Assistant (tool calling) and a C# MCP server: an LLM checks service status and restarts services through a Deployment API only after user confirmation; the same API is exposed to Claude Desktop.

Helpdesk & Ticket Management System | Angular 18, Signals, RxJS, Angular Material, SCSS **2026**

github.com/ranisingh/helpdesk-app

- Full ticket lifecycle: creation, updates, status and priority management, assignment to support users and a live KPI dashboard.
- Feature-based standalone architecture with lazy-loaded and nested routes, Signals/computed() state, reusable stores and services via inject().
- Reusable Material snackbar and confirmation-dialog services, validated Reactive Forms and the new control flow (@if, @for, track).
- Data layer separated from state so it can be connected to an ASP.NET Core Web API and SQL Server.

Employee Onboarding & HR Portal | ASP.NET Core Web API, EF Core, SQL Server **Jul 2026 – Present**

github.com/ranisingh/EmployeeOnboardingSystem

- REST APIs for an employee onboarding process with C#, ASP.NET Core Web API, Entity Framework Core, SQL Server and LINQ.
- JWT authentication, role-based authorization, validation, logging, exception handling, filtering and pagination.

Digital Banking Customer Portal | Angular 18, TypeScript, RxJS, Angular Material, Tailwind **May – Jun 2026**

github.com/ranisingh/digital-banking-portal

- Customer portal with Dashboard, Accounts, Transactions and Card Management modules using standalone components.
- Secure frontend flows with JWT authentication, route guards, HTTP interceptors and automatic session-timeout handling.

EDUCATION & TRAINING

Master of Computer Applications (MCA) | Bharati Vidyapeeth University

Bachelor of Science in Information Technology (B.Sc. IT) | Sikkim Manipal University

.NET Full-Stack Development | C#, ASP.NET Core, Web API, EF Core, SQL Server, Azure DevOps

LANGUAGES

English: Fluent (full professional proficiency) | Hindi: Native | Dutch: A1, actively learning
